1. Go to the **Start Menu** and type **Services** into the Search programs and files menu.

2. At the top of the start menu, a list of programs will appear. From this list, select and click **Services**.
3. Locate **Wired AutoConfig** and double-click on it.
4. Within the Wired AutoConfig Properties window:

- From the Startup type drop-down menu, select **Automatic**.
- Under Service Status, click **Start**.
- Click **OK** and close the Services window.
5. Go to the **Start Menu** and type **Network and Sharing** into the Search programs and files menu.

6. From the list that appears in the start menu, select and click **Network and Sharing Center**.

7. Locate **Change adapter settings** and double-click on it.
8. Locate **Local Area Connection**, right-click on it, and select **Properties** from the drop-down menu.
9. Select the **Authentication** tab. Then, click **Settings**.
10. Uncheck **Validate server certificate**.

11. Uncheck **Enable Fast Reconnect**.

12. Then, click **Configure**...
13. In the window that appears, uncheck the box next to *Automatically use my Windows logon name and password (and domain if any)*.

14. Then, select **OK**.
15. Back within the Local Area Connections Properties window (in the **Authentication** tab), select **Additional Settings**.
16. Ensure the checkbox labeled **Specify authentication mode** is checked. In the drop-down menu select **User Authentication**, then select **Save credentials**.
17. In the box that appears, enter your Catawba Username and Password, then select OK.

18. Click OK in all remaining windows.
